EDUCATION

University of Michigan – Dearborn | Bachelor of Science in Computer Science | August 2025

PROFESSIONAL EXPERIENCE

DTE Energy – Data Tech Process Analyst, Damage Claims Team April 2026 – Present

- Used Python in Visual Studio Code to update Databricks app interfaces and connect data from multiple backend tables to support application functionality.
- Built a Python pipeline to pull SAP C4C data through OData APIs into Databricks for reporting and automation.
- Built a pipeline connecting Smartsheet API with Databricks to automate scorecard data and reporting.
- Performed UAT using SQL to compare Smartsheet data with Databricks tables, finding and resolving data mismatches.

DTE Energy – Operations Analyst (Contractor), EFO Team August 2025 – April 2026

- Built Power BI dashboards for leadership to track operational performance, financial risk, and key metrics.
- Used SQL to analyze operational and financial data to support forecasting and business decisions.
- Led the development of a PowerApps solution that reduced manual work and improved how the team collected and managed data.

DTE Energy – Analyst Co-Op, Damage Claims Team May 2023 – August 2025

- Created SQL reports to review daily claims and support credit approval decisions, helping reduce errors.
- Built Power BI dashboards to track claims and operational data, reducing manual reporting and improving visibility.
- Worked on escalated claims using Databricks, SAP, CRM, Smartsheet, and Excel to investigate issues and process customer credits.
- Managed Smartsheet data by archiving historical records and maintaining platform row limits.

PROJECTS

- **Scorecard Automation (SQL, Python, PySpark, Smartsheet API, Databricks):** Built an automated scorecard pipeline that pulls Smartsheet data into Databricks, uses SQL to transform and join data, and uses Python to send scheduled email reports to stakeholders.
- **SAP C4C Data Extraction into Databricks (Python, OData API, Databricks):** Built an automated pipeline that uses Python to pull SAP C4C data through OData APIs, store it in Databricks tables, and schedule recurring data pulls for reporting and automation.
- **Credit Allocation Project (SQL, Excel, Databricks):** Led the allocation of over \$800K in credits, using SQL in Databricks and Excel formulas to verify eligibility and ensure accurate distribution.
- **Financial & Escalation Claims Dashboards (Power BI, SQL, Smartsheet, Databricks):** Built Power BI dashboards using SQL, Databricks, and Smartsheet data to track multi-million-dollar claims and escalations.
- **SSR Recommendation Project (SQL, Databricks):** Analyzed service center data using SQL in Databricks to recommend engineer allocation and presented the findings to the Director for resource planning.

TECHNICAL SKILLS

Languages & Data: Python, SQL, PySpark

Platforms & Tools: Databricks, Power BI, PowerApps, Visual Studio Code, Smartsheet, SAP C4C, Excel, Git

CERTIFICATIONS:

- PySpark Essential Training – LinkedIn Learning, December, 2025
- SQL Essential Training – LinkedIn Learning, Oct 2024
